

LESSONS WORTH REUSING

3D Snowflake

Description: This snowflake is a bit more unique than most in its 3Dimensional form. It looks amazing in a garland, as an ornament, or if you make it large enough it could even be a tree topper.

Materials Needed:

Used wrapping paper, old magazines or slightly thicker paper.
Glue (Glue Stick, liquid or Glue Gun)
Scissors

Craft:

You will be making two sides that you will glue together.

- Start by making 12 strips of paper 5" long by 1/4" wide strips.
- Separate these strips into two piles of 6. These will become your two sides.

Creating a Side - Do this 2 times for your 2 sides

Step #1 - Weaving

- We will be weaving three strips with three strips
- Glue down the weaved pieces where they intersect
- Repeat with the remaining 6 strips to make 2 sides

Step #2 - Folding

- Take the strips across from each other twist, fold and glue together. Do this to all four corners. The finished side should look like this

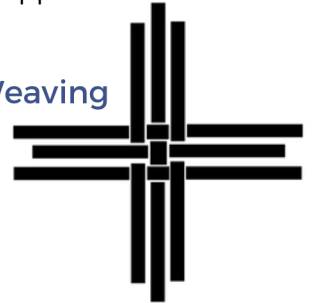

Step #3 - Weave Together

- Set one side on top of the other. Make sure to line up the center strip of one side to the loop opposite on the other side. Then weave the strip into the hole and glue it together.

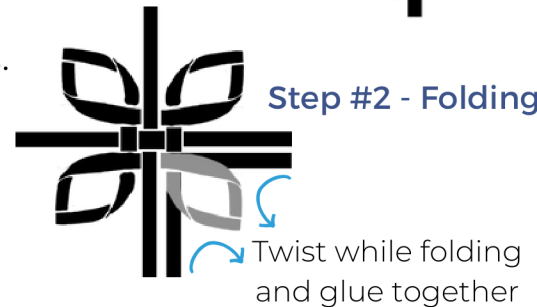

Step #4 - Final Trimming

- Trim all the excess paper from the strips that you weaved into the snowflake openings.

Step #1 - Weaving

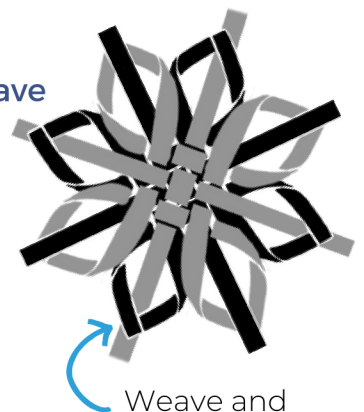

Step #2 - Folding

Twist while folding and glue together

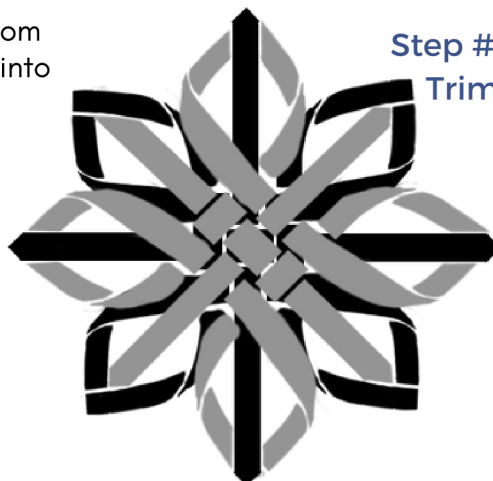

Step #3 - Weave Together

Weave and glue at all 8 of these points

Step #4 - Final Trimming

Trim all 8 snowflake tips
